DGC-2020 DIGITAL GENSET CONTROLLER

Basler Electric's Digital Genset Controller (DGC-2020) is a highly advanced integrated genset control system. The DGC-2020 is perfectly focused, combining rugged construction and microprocessor technology to offer a product that will hold up to almost any environment and flexible enough to meet your application's needs. This device provides genset control, metering, protection and programmable logic in a simple, easy to use, reliable, rugged, and effective package.

Program the DGC-2020 with easy to use front panel navigation keys and the large LCD display or with our enhanced BESTCOMSPlus PC software. Either way, the easy to follow menus make setup and configuration fast and simple. Within BESTCOMSPlus, we have provided a very powerful user-friendly programmable logic program that allows the user to meet specifications that previously would have required an additional PLC to meet. BESTCOMSPlus is included at no additional cost and provides for remote communications, file transfer, and file management. It is one of the most intuitive software programs available for genset controllers.

FEATURES

- Generator Metering
- Engine Metering
- Genset Control
- Engine Protection
- Generator Protection (27, 59, 81O, 81U)
- BESTCOMSPlus (included with every DGC-2020 at no additional cost)
 - Programming and setup software
 - Intuitive and powerful
 - Remote control and monitoring
 - Programmable Logic
 - USB communications
- Suitable for use on rental gensets with
 - Hi/Lo line sensing
 - Single or three phase sensing override
- SAE J1939 Engine ECU communications
- Multilingual capability
- Remote communications to our RDP-110 Remote Annunciator
- Battery Backup for Real Time Clock
- LCD Heater
- Extremely rugged, fully encapsulated design
- 16 programmable contact inputs
- 2 Contact outputs: (1) 30 Adc Gen. Run (1) Programmable 2 Adc rated contacts
- Wide Ambient Temperature range
- Additional (8) Programmable 2 Adc contacts (optional)
- Remote Dial-out and Dial-in capability with Internal Modem (optional)
- Enhanced Generator Protection 51 and 47 available (optional)
- Modbus Communications with RS-485
- Expandable I/O capability via J1939 CANBUS (optional)
- UL recognized, CSA certified, CE approved
- HALT (Highly Accelerated Life Tests) tested
- IP 54 Front Panel rating with integrated gasket
- NFPA110 Level Compatible

DESCRIPTION

The DGC-2020 is a microprocessor based generator set controller that incorporates advanced technology and features into a value added, user friendly, rugged design. This device is encapsulated and is the most rugged genset controller found anywhere. It provides front panel and PC programmability. It can sense engine parameters directly via analog senders, or it can communicate with the engine's ECU using SAE J1939 CANBUS communications. This device offers programmable inputs and outputs and programmable logic to allow the user to easily customize the operation of the DGC-2020 as desired.

The DGC-2020 can be configured to have eight additional output contacts, an internal RS-485, an internal industrial modem for remote communications and dialing out to a pager when the DGC-2020 detects trouble. The DGC-2020 also has optional features for enhanced generator protection.

FUNCTIONS

GENSET PROTECTION

Generator (Standard Protection)

Undervoltage (27) Underfrequency (81U)
Overvoltage (59) Overfrequency (81O)

All Generator Protection features are programmable as Alarms or Pre-alarms.

Enhanced Generator Protection (Optional)

Phase Imbalance (47)
Generator Overcurrent (51)

Engine

Alarms (Shutdowns)

Low Oil Pressure
High Coolant Temperature
Low Coolant Level
Overspeed
Overcrank
Engine Sender Unit Failure
Fuel Leak/Fuel Sender Failure
Emergency Stop
Battery Charger Failure

Pre-Alarms (Warnings)

Low Oil Pressure Engine kW Overload
High Coolant Temperature Maintenance Interval Timer
Low Coolant Temperature Low Coolant Level
Battery Overvoltage High Fuel Level
Weak Battery Low Fuel Level
Battery Charger Failure Fuel Leak Detect
Engine Sender Unit Failure

All Alarms and Pre-Alarms can be enabled or disabled via the BESTCOMSPlus PC software or the front panel.

GENSET METERING

- Metered generator parameters include voltage, current, Hz, real power (watts), apparent power (VA), and power factor.
- Metered engine parameters include oil pressure, coolant temperature, RPM, battery voltage, fuel level, engine runtime, and various J1939 supported parameters.

ENGINE CONTROL

Cranking Control: Cycle or Continuous (Fully Programmable)
Engine Cooldown: Smart Cooldown function saves fuel and engine life.
Successful Start Counter: Counts and records successful engine starts
Timers:

- Engine Cooldown Timer
- Engine Maintenance Timer
- Pre-Alarm Time Delays for Weak/Low Battery Voltage
- Alarm Time Delay for Overspeed
- Alarm Time Delay for Sender Failure
- Arming Time Delays after Crank Disconnect:
 - Low Oil Pressure
 - High Coolant Temperature
- Pre-Crank Delay
- Continuous or Cycle Cranking Time Delay

EVENT RECORDING

The DGC has an event recorder that provides a record of alarms, pre-alarms, engine starts, engine runtime loaded, engine runtime unloaded, last run date, and many other events that are all date and time stamped to help the user determine the cause and effect of issues related to the generator set.

BATTERY BACKUP FOR REAL TIME CLOCK

A ten-year (typical life) lithium battery is used to provide long term maintenance of the real time clock setting. This battery is serviceable by removing the rear cover. Please note that the settings, programming, and event records are save in non-volatile memory and do not require battery backup.

FUNCTIONS, continued

PROGRAMMABLE LOGIC

The DGC-2020 offers a very powerful, yet easy to use, programmable logic scheme for custom programming of the various inputs, outputs, alarms, and pre-alarms. It allows these elements to be integrated into a complete logic scheme so that the user can meet even the most complex specification. The Programmable Logic control includes the selection of logic gates and timers with drag-and-drop technology to make it fast and simple.

REMOTE DISPLAY PANEL ANNUNCIATION

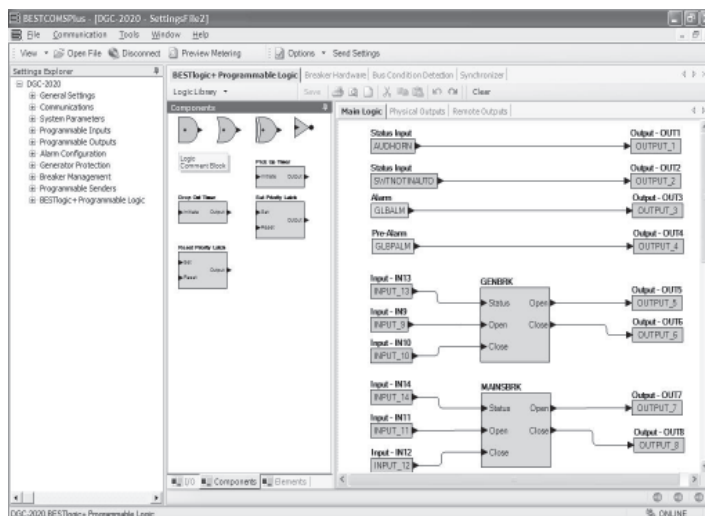

The DGC-2020 can communicate to a remote display panel, Basler Model RDP-110. This requires only two wires to annunciate all of the alarms and pre-alarms required by NFPA-110 Level I and II.

MODEM (Optional)

A dial-out modem enables remote control, monitoring, and setting of the DGC-2020. When an alarm or pre-alarm condition occurs, the DGC-2020 can dial up to four telephone numbers, in sequence, until an answer is received and the condition is annunciated.

RS-485 (Modbus)

The user can send and receive information from the DGC-2020 via the RS-485 communications port and Modbus protocol. This feature allows the DGC-2020 controlled genset to be fully integrated into the building management system. Please see the Instruction Manual for Modbus register list.

J1939 COMMUNICATIONS

J1939 CANBUS communications allows the DGC to communicate to the engine's ECU (Engine Control Unit) to gather critical engine information like oil pressure, engine coolant temperature, RPM, battery voltage, and many more. By utilizing the ECU, adding analog engine senders is no longer required. It also eliminates any errors or discrepancies between the ECU data and the data displayed on the DGC that may be present due to analog sender inaccuracies or incompatibility. A total of 47 engine parameters can be obtained via the ECU. You also can derive the added benefit of having access to the ECU's diagnostic troubleshooting codes, or DTCs. The DTCs provide information about the engine's operating conditions and communicates these via J1939, to the DGC, thus eliminating the need for hand-held service tools to diagnose simple engine issues. With the optional modem, the DTCs can be accessed remotely, and valuable service time can be saved by remote diagnostics and taking the right parts to fix the problem the first time.

SPECIFICATIONS

Operating Power

Nominal: 12 or 24 Vdc

Range: 6 to 32 Vdc

Power Consumption:

Sleep Mode: 5W with all relays non-energized

Typical Operational Mode:

14.2W - Run mode, LCD heater on,

6 relays energized

Battery Ride Through:

Withstands cranking ride-through down to 0 V for 50 ms (typical).

Current Sensing

5 Aac Current Sensing 1 Aac Current Sensing

Continuous Rating: 0.1 to 5.0 Aac 0.02 to 1.0 Aac

1 Second Rating: 10 Aac 2 Aac

Burden: 1 VA 1 VA

Voltage Sensing

Range: 12 to 576 V rms, line-to-line

Frequency Range: 10 to 72 Hz for 50/60 style and
10 to 480 Hz for 400 Hz style

Burden: 1 VA

1 Second Rating: 720 V rms

Contact Sensing

Contact sensing inputs include 1 emergency stop input and 16 programmable inputs. The emergency stop input accepts normally closed, dry contacts. All programmable inputs accept normally open, dry contacts.

Engine System Inputs

Fuel Level Sensing Resistance Range:

33 to 240 Ω nominal

Coolant Temperature Sensing Resistance Range:

62.6 to 637.5 Ω nominal

Oil Pressure Sensing Resistance Range:

34 to 240 Ω nominal

Engine Speed Sensing:

Magnetic Pickup

Voltage Range: 3 to 35 V peak (6 to 70 V peak-peak)

Frequency Range: 32 to 10,000 Hz

Generator Voltage

Range: 12 to 576 V rms

Stated accuracies are subject to the accuracy of the senders used.

SPECIFICATIONS, continued

Output Contacts

Fuel Solenoid, Engine Crank, Pre-Start Relays Rating:
30 Adc at 28 Vdc-make, break, and carry
Programmable Relays (up to 12) Rating:
2 Adc at 30 Vdc-make, break, and carry

Metering

Generator Voltage (rms)

Metering Range:
0 to 576 Vac (direct measurement)
577 to 9,999 Vac (through VT using VT ratio setting)
Accuracy: $\pm 1.0\%$ of programmed rated voltage or ± 2 Vac

Generator Current (rms)

Generator current is measured at the secondary windings of user-supplied 1 A or 5 A CTs.
Metering Range: 0 to 5,000 Aac
CT Primary Range: 1-5,000 Aac, in primary increments of 1 Aac
Accuracy: $\pm 1.0\%$ of programmed rated current or ± 2 Aac

Generator Frequency

Metering Range: 10 to 72 Hz (50/60 Hz)
10 to 480 (400 Hz)
Accuracy: $\pm 0.25\%$ or 0.05 Hz

Apparent Power

Indicates total kVA and individual line kVA (4-wire, line-to-neutral or 3-wire, line-to-line).
Accuracy: $\pm 3\%$ or the full-scale indication or ± 2 kVA

Power Factor

Metering Range: 0.2 leading to 0.2 lagging
Accuracy: ± 0.02

Real Power

Indicates total kW and individual line kW (4-wire, line-to-neutral or 3-wire line-to-line)
Accuracy: $\pm 3\%$ of the full-scale indication or ± 2 kW

Oil Pressure

Metering Range: 0 to 145 psi or 0 to 1,000 kPa
Accuracy: $\pm 3\%$ of actual indication or ± 2 psi or ± 12 kPa (subject to accuracy of sender)

Coolant Temperature

Metering Range: -40 to 410°F or -40 to 210°C
Accuracy: $\pm 3\%$ or actual indication or $\pm 2^\circ$ (subject to accuracy of sender)

Fuel Level

Metering Range: 0 to 100%
Accuracy: $\pm 2\%$ (subject to accuracy of sender)

Battery Voltage

Metering Range: 6 to 32 Vdc
Accuracy: $\pm 3\%$ of actual indication or ± 0.2 Vdc

Engine RPM

Metering Range: 0 to 4,500 rpm
Accuracy: $\pm 2\%$ of actual indication or ± 2 rpm

Engine Run Time

Engine run time is retained in nonvolatile memory.
Metering Range: 0 to 99,999 h
Update Interval: 6 min
Accuracy: $\pm 1\%$ of actual indication or ± 12 min

Maintenance Timer

Maintenance timer indicates the time remaining until genset service is due. Value is retained in nonvolatile memory.

Metering Range: 0 to 5,000 h
Update Interval: 6 min
Accuracy: $\pm 1\%$ or actual indication or ± 12 min

Generator Protection Functions

Overvoltage (59) and Undervoltage (27)

Pickup Range: 70 to 576 Vac
Activation Delay Range: 0 to 30 s

Underfrequency (81U) and Overfrequency (81O)

Pickup Range: 45 to 66 Hz (50/60 Hz nominal)
360 to 440 Hz (400 Hz nominal)
Pickup Increment: 0.1 Hz (50/60 Hz nominal)
0.1 Hz (400 Hz nominal)
Activation Delay Range: 0 to 30 s

Overcurrent (51) (Optional)

Pickup Range: 0.18 to 1.18 Aac (1 A current sensing)
0.9 to 7.75 Aac (5 A current sensing)
Time Dial Range: 0 to 30 s (fixed time curve)
0 to 9.9 (inverse curve time multiplier)

Inverse Time Curves:

17 selectable Time Overcurrent Characteristic Curves

Phase Imbalance (47) (Optional)

Pickup Range: 5 to 100 Vac
Pickup Increment: 1 Vac
Activation Delay Range: 0 to 30 s
Activation Delay Increment: 0.1 s

Environmental

Temperature

Operating: -40 to 70°C (-40 to 158°F)

Storage: -40 to 85°C (-40 to 185°F)

Humidity: IEC 68-2-38

Salt Fog: ASTM B 17-73, IEC 68-2-11
(tested while operational)

Ingress Protection: IEC IP54 for front panel

Shock: 15 G in 3 perpendicular planes

Vibration: 5 to 29 to 5 Hz: 1.5 G peak for 5 min.
29 to 52 to 29 Hz: 0.036" DECS-A for 2.5 min.
52 to 500 to 52 Hz: 5 G peak for 7.5 min.

Swept over the following ranges for 12 sweeps in each of three mutually perpendicular planes with each 15-minute sweep.

HALT (Highly Accelerated Life Testing)

Halt Testing is a method used by manufacturers concerned about high quality to prove that their products will provide the user with many years of reliable service. Halt testing subjects the device to extremes in temperature, shock, and vibration to simulate years of operation, but in a much shorter time span. Halt testing allows Basler to evaluate all possible design elements that will add to an increase in the life of this device. As an example of some of the extreme testing conditions, the DGC-2020 was subjected to Temperature Tests (tested over a temperature range of -100°C to +115°C), Vibration Tests (swept over a frequency of 5 to 50G at +20°C), and Temperature/Vibration Tests (tested at 40G over a temperature range of -80°C to +90°C). Please note that the vibration and temperature extremes noted here are specific to HALT testing and do not reflect recommended operation level.

SPECIFICATIONS, continued

Agency Approvals

UL/CSA Approvals

"cURus" approved to UL 508 R and CSA C22.2 No.14

NFPA Compliance

Complies with NFPA Standard 110, Standard for Emergency and Standby Power.

CE Compliance

This product complies with the requirements of the following EC Directives:

- Low Voltage Directive (LVD) - 73/23/EEC as amended by 93/68/EEC

- Electromagnetic Compatibility (EMC) - 89/336/EEC as amended by 92/31/EEC and 93/68/EEC
- EN 50178:1997 - Electronic Equipment for use in Power Installations
- EN 61000-6-4:2001 - Electromagnetic Compatibility (EMC), Generic Standards, Emission Standard for Industrial Environments
- EN 61000-6-2:2001 - Electromagnetic Compatibility (EMC), Generic Standards, Immunity for Industrial Environments

Physical

Weight: 2 kg (4.4 lb)

Figure 1 - Front Panel HMI (Human Machine Interface)

FRONT PANEL LED INDICATORS

Run:	Green - Indicates the DGC is in the RUN mode.
Off:	Red - Indicates the DC is in the OFF mode.
Auto:	Green - Indicates the unit is in the AUTO mode of operation.
Supplying Load:	Green - Indicates the system is supplying current to a connected load.
Alarm:	Red - Indicates an alarm situation by continuous illumination. Indicates a Pre-alarm by flashing.
Not in Auto:	Red - Indicates unit is not in the AUTO mode.

PACKAGING

DGC-2020 offers a complete system of environmental hardening. Its design utilizes advanced engineering and design techniques to allow it to operate in the harshest environments. The DGC-2020 uses encapsulated construction that has been successfully proven on hundreds of thousands of voltage regulators built by Basler. We have included an integrated gasket to seal the front panel to an IP54 rating, and we included a protective cover on the rear of the DGC-2020.

OPTIONAL FEATURES

The DGC-2020 has been designed to provide maximum functionality at a minimum price. You only need to buy what you need. We have selected options to help maximize the value provided by the DGC-2020.

Additional Contact Outputs

For those applications where more output contacts are needed, the DGC-2020 can be adapted to include 8 additional 2 A dc rated dry contact outputs. These are real contacts and not the solid-state type that require additional external circuitry to properly operate. These contacts are fully programmable via the easy-to-use BESTCOMSPlus PC software and can be assigned for numerous user-defined functions.

Auto-Synchronizer

When the DGC-2020 is configured with this option, the user can select between two types of autosynchronizer, phase lock or anticipatory style. In both methods, the DGC-2020 adjusts generator frequency and voltage to match that of the bus (mains) via contact outputs, then connects the generator to the bus by closing the connecting breaker.

Internal Modem

The DGC-2020 can provide long distance communications by including an internal modem. When the modem is selected, the user can access the DGC-2020 from virtually anywhere via a telephone line. The user can control and monitor the genset as if standing right next to it. The DGC-2020 can also dial out for pre-programmed circumstances to alert the user of selected conditions.

Enhanced Generator Protection

In addition to the standard generator protection (27, 59, 81O, 81U), the DGC-2020 also can be equipped with a more sophisticated generator protection system. This option provides an overcurrent element (51) with 17 selectable time current characteristic curves and a voltage phase balance protection function (47).
